

**Fusion Inventory Management (FusionIM™)** provides advanced functionality to manage the inventory of your retail store. At the desktop or using an RF device, users can create replenishment orders via Purchase Order or Transfer Order, receive merchandise, print labels, manage movement between floor and stock, and more. With the RF capabilities of FusionIM™, full and cycle counts are simple.

FusionIM™, used in conjunction with FusionPOS™, provides accurate, perpetual real-time inventories even in batch-processed ERP environments. With the FusionIM™ you will increase:

*Accuracy*  
*Productivity*  
*Customer Satisfaction*  
*Sales*  
*Profitability*

FusionIM™ automates and optimizes all aspects of inventory management and includes the following:

**Replenishment.** FusionIM™ offers a simple, one screen interface for managing inventory requests. The system suggests order quantities based on your specific needs using average daily sales, lead times, order horizon, min / max levels in addition to current inventory levels. It can group multiple items onto a single Purchase Order by vendor, and can optimize existing inventory levels by automatically creating Transfer Orders between locations to improve inventory turns. FusionIM™ even handles cascading replenishment scenarios such as central warehouse / regional warehouse / retail store. With FusionIM™, maintaining the appropriate stocking levels is a breeze.

**Receiving.** FusionIM™ automates the receipt of merchandise, and can be use a desktop or a mobile RF unit.

**Features include:**

- Purchase Order or Transfer Order receipts
- Blind or conventional quantity receipts
- Auto or directed put-away
- Paperless check-in process
- Exception notifications
- Intuitive role-based interface
- Smart print of barcodes on receipts

**Inventory Movement.** FusionIM™ is ideal for multi-bin or zone locations. Bins are more prevalent in warehouses whereas retail stores are typically segmented into floor stock and back stock. Knowing where merchandise is and tracking the movement between locations can mean the difference between a sale and no sale.

**Physical Count.** The bane of inventory has been it requires a count. FusionIM™ minimizes the pain of inventory counts by adapting to your needs. Whether you count your entire inventory or sections; use a count sheet, RF device or multiple RF devices, FusionIM™ makes the job easier.

**Features include:**

- Automatic validation and auditing
- Built-in error resolution
- Support for multiple bins and item views
- Advanced reporting

**Printing/ UPC management.** At the core of every inventory management system is the ability to scan a barcode. FusionIM™ makes managing barcodes easy. FusionIM™ can create a barcode using the item ID or recognize the UPC and associate it with an item. It can even recognize multiple UPCs and associate them all with one item. FusionIM™ can print simple or complex, user configured barcodes on demand or automatically upon receipt. Since FusionIM™ stores label information for each item, label costs and mislabeled products are minimized.

**Features include:**

- Print quantity on hand, quantity on order, or fixed amounts
- User-defined barcode formats
- Supported by Crystal Reports for quick and easy changes

FusionIM™ is the ultimate tool for retail inventory management. Paired with FusionPOS™, it gives retailers complete end-to-end visibility and frees you from the mechanics of moving product. Let us handle the science you focus on the art.
