FusionWMS for Sage 500

True integration provides new avenues to profitability and customer retention. Give yourself the competitive advantage with technology that enables you to achieve the next level of success. With the Fusion Inventory Management Solution (FIM), you can greatly enhance your economies of scale with:

- Improved productivity
- Enhanced inventory efficiency
- Improved customer service
- Increased inventory accuracy
- Reduced operational costs
- Increased throughput
- Improved accuracy and responsiveness
- Increased on-time deliveries
- Optimized order fulfillment

FIM automates and optimizes all aspects of distribution center operations, from receiving to order selection, picking, loading, and shipping. Through powerful add-on modules, it can also handle light production/cut down and job tracking, as well as real-time shipping through the Internet. Some of the Fusion WMS core features are:

Receiving

- Paperless check-in process
- Full or partial receipt
- RF and/or batch processing
- Simultaneously receiving purchase orders
- Non-P.O. receiving
- Simplified interface to increase productivity
- Automatically printing barcodes when complete

Shipping

- Immediate Sales Order verification (RF)
- Integrated multi-carrier shipping program
- Shipping multiple sales orders at the same time
- Container type selection
- Automatically printing shipping labels
- Shipping partial orders and creating backorders
- Adding freight amount to the order
- Printing pick tickets, packing lists, and invoices
- Tracking multiple tracking numbers

Inventory Movement

- Custom report generation using Crystal Reports™
- Lot, serial, and bin maintenance
- One-click transfer
- One-stage or two-stage transfers

Physical Count

- Automatic validation and auditing
- Built-in error resolution
- Supporting multiple bins and item views
- Advanced reporting

Printing

- Print quantity on-hand, quantity on order, or fixed amounts
- Multi-location support
- Supported by Crystal Reports for quick and easy changes

Fusion Shipping

Fusion Shipping makes the shipping process simple by giving your hand-held data terminals instant access to sales order information. Each scan is immediately verified against the sales order, eliminating the need to "double-check" each and every item, increasing accuracy and efficiency. When you're ready to ship an order, all appropriate documents are printed, including the sales order, packing list, and customer invoice. Once this process is complete, Fusion Shipping automatically updates your accounting system with the shipped order.

Fusion Receiving

When receiving items at the warehouse, store, or distribution center, it is imperative to have a quick and accurate count. The received items are immediately verified against the specific purchase order, eliminating potential errors, incorrect items, and redundant information. The Receiving module then creates the proper transactions in your accounting system, bypassing the need for manual entry. This quick and simple process will allow your work force to increase their productivity and focus.

Fusion Inter-Location Transfer

With the Fusion Inter-Location Transfer module, you simply have to pick the source warehouse, the destination warehouse, and the items to transfer. Click a button, and you're done! The Inter-Location Transfer module takes care of the rest, creating the appropriate inventory transactions in your accounting system.

Fusion Physical Count

The Fusion Physical Count module allows you to quickly and accurately take physical counts across multiple warehouses, bins, and lots. When you use Fusion Physical Count and an RF or Batch hand-held computer you can audit your inventory counts quickly and easily at any time, instead of waiting for the dreaded yearly cycle-count. This module will make your employees accountable and empower you to make changes to help your company eliminate lost and misplaced items.

Fusion Barcode Printing

With the Fusion Barcode Printing module, you can put bar coded labels on your existing inventory, increasing efficiency and customer satisfaction. The Fusion Barcode Printing module allows you to print any number of labels at any time. Simply select a single item or range of items from your inventory master file, enter the number of labels you want printed (either a fixed quantity or let the printing module print labels based off of your current, on-hand quantity), and click PRINT. It really is that easy!
