FUSION WMS

Comparison of Acumatica's and Fusion's Warehouse Management Capabilities

At Fusion, we partner with Acumatica to provide state of the art warehouse management capabilities to clients of all sizes and requirements. Our continuous innovation provides deeper and more specialized functionality focused on complex warehouse environments.

FusionWMS uses Android devices and technology proven in over eighty Acumatica installations and thousands across many ERP platforms. Still completely embedded in Acumatica, FusionWMS has no external tables or applications other than the software on the handheld device. Installation is as easy as installing an Acumatica customization package and downloading the handheld software from Google Play.
